
Temporal Source Grounding (TSG)

Q. When does the electric guitar first start to play?

A. 0:45

Local Transition Recognition (LTR)

Q. What best describes the musical change at 1:30?

A. The percussive impact recedes, drum hits soften and the rhythmic presence eases.

B. The drums surge forward with a punchier attack as the rhythmic pulse tightens.

C. The mood brightens, yet the instrumentation stays unchanged.

D. There is no musical change.

Transition-aware Description (TAD)

Q. Describe the musical change at 1:30 in detail.

A. The drums surge forward with a punchier attack as the rhythmic pulse tightens.

Global Temporal Ordering (GTO)

Q. Which of the following options represents the correct chronological order of these transitions as they appear in the track?

(X) The harmony shifts back to bright C major and the overall mix adopts a quieter, more intimate character as emotional arousal eases.
(Y) A clear electronic drum layer punctuates the texture with a defined attack, introducing a steady pulse that reinforces the rhythmic drive.
(Z) The piece lifts its emotional intensity as the perceived arousal rises, accompanied by a noticeable acceleration of the tempo from a languid pulse toward a more forward-moving flow.

A. X → Y → Z B. X → Z → Y C. Y → X → Z
D. Y → Z → X E. Z → X → Y F. Z → Y → X

Mood Trajectory Reasoning (MTR)

Q. When is(are) the highest arousal duration(s) in this track?

A. 2:05-2:40
